Attention: 

Chief, MSD/PIC

*MSD/PIC 1114-59*

14 September 1959

Requirement DP-HTA/R 60-59.

1. This memorandum is in answer to paragraph 1, only of the requirement listed above. The two rolls of small scale ground photography were scanned as requested.
2. The quality and scale of some photos preclude a definite statement as to the nature and function of the objects seen in the distance. The tower imaged on frames 5 and 12 of roll 5 and frame 9 of roll 6 may possibly be used as a beacon light or a triangulation tower for survey purposes. Reflectors and a building housing amplification equipment normally associated with microwave systems are not visible on the photos. The structure on frames 26 and 27 of roll 6 apparently houses some type of mobile equipment. Lightweight electronic surveillance equipment might be housed here with associated heavier equipment in the shed below. What appears to be one wheel of a vehicle is evident at the top of the ramp.
3. It is believed that none of the structures in these photos are associated with known types of microwave relay systems.
